

Readme.md:

```
1.node -v
2.create a folder in local disk c
3.npm create vite
4.enter folder name
5.select react and javascript
6.type cdalong with foldername
7.npm install
8.npm run dev
9.then check folder which react packages has uploaded.
10.then copy the url and folder page and type code space . in commmand prompt
11.then after automatically you will go to vs code and that page asks whether
this is trusted or not.
12.so you can open the terminal and type npm install then after type npm run
dev
```
